Topic and Video

I chose to study and teach about: **Attribute Selectors**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: <https://youtu.be/rROkDoTvKnl>.

Summary

In my video, I explained how CSS attribute selectors can style elements based off their HTML attributes. I went over presence selectors like `[disabled]`, exact values like `[type="email"]`, and substring selectors like `"^="`, `"$="`, and `"*="`. I showed attribute selectors styling links to external sites, email links, and PDF files. I showed how data-* attributes can control the style of the page. I also talked about the `i` tag for case insensitive matching. After my recording, I could've done a better job of explaining that attribute selectors are better than adding a class, especially if the HTML attribute has the info the CSS needs to work.
